## ABSTRACT

This publication is the fourth report in an annual survey series designed to provide reliable data on individual local public school systems for planning, policy, and research purposes. The report contains tables of national estimates and basic data tables providing quantitative staff data on the school systems in the survey. The data are derived from a sample survey of approximately 5,200 school systems. The survey was so designed that State estimates, as well as regional and national estimates, could be generated. Most of the tabular presentation analyses are based on (1) six enrollment-size groups based on school system average daily membership as determined by presample selection and design; (2) the three metropolitan status categories of metropolitan-central, metropolitan-other, and nonmetropolitan; and (3) four regions of the United States -- North Atlantic, Great Lakes and Plains, Southeast, and West and Southwest. A related document is ED 054 549. (Author).

FILMED FROM BEST AVAILABLE COPY

HIGHLIGHTS

Early Childhood Instruction.--The number of prekindergarten teachers increased from 2,456 in fall 1969 to 3,125 in fall 1970, an increase of 27.2 percent. During this same period the number of kindergarten teachers increased from 56,734 to 62,572, or 10.3 percent.

Teacher Aides.--The number of persons involved with nonteaching assignments to assist the classroom teachers (teachers aides) increased from 94,595 (fall 1969) to 115,548 (fall 1970), an increase of 22.5 percent. A considerable part of this increase may be due to an increased use of Federal funds, especially ESEA title I, for this purpose.

Education of the Classroom Teacher.--The Nation's classroom teachers continued to show higher levels of educational attainment. In fall 1970, 96.2 percent of the classroom teachers had at least a bachelor's degree, compared with 94.5 percent in fall 1968 and 95.6 percent in fall 1969.

## FOREWORD

This report containing basic data on staff in the Nation's public school systems is the fourth annual report of this kind. It is a part of the Elementary-Secondary General Information Survey (ELSEGIS) series. It is a cooperative venture of the United States Office of Education's National Center for Educational Statistics (NCES) and the Committee on Educational Data Systems (CEDS) of the Council of Chief State School Officers.

The development of the ELSEGIS series was necessitated by a requirement for reliable data on individual local public school systems for planning, policy, and research purposes. To this end, the data have been used by educational administrators at all levels of government--Federal, State, and local--as well as organizations in the private sector.

This report contains tables of national estimates and basic data tables providing quantitative staff data on the school systems in the survey. The data are derived from a sample survey which was designed so that State estimates, as well as regional and national estimates, could be generated.

The collection and editing phase of this survey has been conducted in the Elementary-Secondary Surveys Branch by Warren A. Hughes, assisted by Janet L. Hall. Analysis and publication planning were done under contract by Measurement Research Center (MRC), Division of Westinghouse Learning Corporation (WLC), and monitored by Mr. Hughes. An indepth analysis of these data is scheduled for release in a future publication.

Our sincere appreciation is expressed to the CEDS representatives, other State agency research and statistical personnel, and local school officials, with whose cooperation a 96 percent response rate was attained.

Roy C. Nehrt, Chief  
Elementary and Secondary  
Surveys Branch

### TABLES OF NATIONAL ESTIMATES

A. Staff in local public school systems, by enrollment size of school system and type of assignment: United States, fall 1970 . . . . .	7
B. Staff in local public school systems, by metropolitan status and type of assignment: United States, fall 1970 . . . . .	8
C. Staff in local public school systems, by type of assignment, and by region and State: United States, fall 1970 . . . . .	9
D. Change in professional instructional staff in local public school systems, by type of assignment: United States, fall 1968, 1969, and 1970 . . . . .	12
E. Percent distribution of classroom teachers, by highest level of education completed, and by enrollment size and metropolitan status of school system: United States, fall 1970 . . . . .	13

### BASIC DATA TABLES

1. School system staff, by position, in selected local public school systems: United States, fall 1970 . . . . .	17
2. Classroom teachers, by highest level of education completed, in selected local public school systems: United States, fall 1970 . . . . .	142

## INTRODUCTION

The information contained in this publication concerns local public school system staff (as of fall 1970) and is the fourth such report derived from the Elementary-Secondary General Information Survey (ELSEGIS) series. ELSEGIS is a cooperative annual venture of the National Center for Educational Statistics (NCES) and the Committee on Educational Data Systems (CEDS) of the Council of Chief State School Officers. The first report in the ELSEGIS series was based on a fall 1967 pilot survey and was published in March 1969. 1/ Subsequent surveys and publications were ELSEGIS I, II, and currently ELSEGIS III for the school years 1968-69, 1969-70, and 1970-71 respectively.

The ELSEGIS series also includes data on pupils, finances, and media services. Data in these areas will be covered in separate publications.

Approximately 5,200 school systems were sampled for this survey. The ELSEGIS series was designed to collect as much of the required data as possible from the records of State education agencies (SEA's), and in 44 States data were provided by SEA. In the remaining seven States, the data were prepared by the local school system. In all, a 96 percent response rate was attained. In some States where data were not available, estimates were provided by the State or local system. In other instances, estimates were generated by NCES from published State reports.

In all, 22 of the States responded to the staff section of the survey with edited data in machine-readable form (cards or tape). This was the largest number to do so in the 4-year ELSEGIS history. Other States responded on the standard survey forms provided. 2/

For reporting consistency, the survey items and their definitions were designed to agree, as nearly as possible, with the categories and terminology of the U.S. Office of Education handbooks. 3/ The standard terminology of these handbooks was developed jointly by the Office of Education, the State education agencies, educational organizations and many prominent educators--including local school officials. Despite efforts to acquire uniform reporting among States, as well as from system to system within States, there is evidence that differences still exist. For example, in some cases where clerical assistants were not reported separately, they may have been included with "other nonprofessional staff."

---

1/ Statistics of Local Public School Systems, 1967.

2/ See appendix C, ELSEGIS III survey forms.

3/ Handbook I - The Common Core of State Educational Information.

Handbook II - Financial Accounting for Local and State School Systems.

Handbook IV - Staff Accounting for Local and State School Systems.

Handbook V - Pupil Accounting for Local and State School Systems.

In addition, in States where the personnel accounting system did not provide for a given position, it may not have been reported. For example, in Tennessee, the State education agency does not budget for or collect data on the position of "assistant principal." Therefore, this position was not reported although local school staff may have performed this function and held this title. Where gross differences appeared and were detected, they have been adjusted or footnoted. However, it is likely that some reporting inconsistencies went unnoticed and will be found in the tabular presentations.

Most tabular presentation analyses in this publication are based on the following controls:

- a. Six enrollment-size groups, based on school system average daily membership (ADM) as determined by presample selection and design. 4/

25,000 or more
10,000 - 24,999
5,000 - 9,999
2,500 - 4,999
300 - 2,499
Under 300

These categories are identical to those used in previous ELSEGIS publications and provide a stable basis for comparison over the ELSEGIS report series.

- b. Three metropolitan status categories:

Metropolitan, central  
Metropolitan, other  
Nonmetropolitan

A school system was regarded as "metropolitan" if it was located in a county defined as a standard metropolitan statistical area (SMSA). In New England, SMSA's were determined on the basis of towns, rather than counties. A school system located outside of the SMSA's was classified as "nonmetropolitan."

Metropolitan systems were further defined as either "central" or "other" as follows:

If coterminous with or located within the boundaries of a central city (the large city comprising the hub of the SMSA), it was classified as metropolitan, central.

If located within the SMSA but outside of the central city, it was classified as metropolitan, other.

---

4/ See appendix A, Sample Design and Selection.

If, as in some large county-unit school systems, the population of a central city (1960 census) within the system was 50 percent or more of the county population, the system was regarded as metropolitan, central; if less than 50 percent, metropolitan, other. For example, the Mobile, Alabama, school system was classified metropolitan, central, because Mobile City made up 54 percent of the county population; but the Dade County, Florida, system was placed in the metropolitan, other, category because the central city of Miami accounted for only 31 percent of the county population.

c. Four regions of the United States:

<u>North Atlantic</u>	<u>Great Lakes and Plains</u>	<u>Southeast</u>	<u>West and Southwest</u>	
Connecticut	Illinois	Alabama	Alaska	Utah
Delaware	Indiana	Arkansas	Arizona	Washington
District of Columbia	Iowa	Florida	California	Wyoming
Maine	Kansas	Georgia	Colorado	
Maryland	Michigan	Kentucky	Hawaii	
Massachusetts	Minnesota	Louisiana	Idaho	
New Hampshire	Missouri	Mississippi	Montana	
New Jersey	Nebraska	North Carolina	Nevada	
New York	North Dakota	South Carolina	New Mexico	
Pennsylvania	Ohio	Tennessee	Oklahoma	
Rhode Island	South Dakota	Virginia	Oregon	
Vermont	Wisconsin	West Virginia	Texas	

For the sake of consistency in tabulation, the summary data are presented to the nearest whole number. Because the data are estimates derived from a sample, they are subject to both sampling and nonsampling errors. As such, they must not be regarded as precise to the last digit.

Listed below are the two position State abbreviations adopted by the U. S. Postal Service, and used in the basic data tables:

<u>State</u>	<u>Abbreviation</u>	<u>State</u>	<u>Abbreviation</u>
Alabama . . . . .	.AL	Hawaii. . . . .	.HI
Alaska. . . . .	.AK	Idaho . . . . .	.ID

Oklahoma. . . . .	.OK	Wisconsin . . . . .	.WI
Oregon. . . . .	.OR	Wyoming . . . . .	.WY
Pennsylvania. . . . .	.PA		

#### USER CAUTIONS

The data in this report are comparable from school system to school system, as well as from State to State, to the extent that they were based on a standard report form using standard Office of Education handbook terminology. But, despite the increasing use of the handbooks, staff accounting methods vary widely among the States and the local school systems.

The State education agencies and the local school systems were requested to provide estimates when actual data were not available. To promote maximum comparability, the survey records were edited intensively. When discrepancies were detected, every effort was made to secure a revised report. In situations where these apparent discrepancies could not be remedied, they have been identified.

For these reasons, users of the data are cautioned about making direct comparisons of individual school systems without additional investigation.

Additionally, it should be kept in mind that these data are derived from a sample survey and are, therefore, subject to sampling variability. Please refer to appendix A, the section dealing with Sample Reliability.

Table 2.--Classroom teachers, by highest level of education completed, in selected local public school systems: United States, fall 1970, (Full-time and part-time positions)--It was requested that these positions be reported on the basis of full-time and part-time only, for those staff members assigned as classroom teachers. In some instances these totals will be greater than those reported in table 1, this is due to differences in reporting, since table 1 entries are reported in full-time equivalents.

## APPENDIX A

### Sample Design and Selection

#### Sample Design

The population of inquiry for this survey was the approximately 17,250 operating local public school systems in the 50 States and the District of Columbia.

Some of the requirements that affected the sample design were:

1. Provide highly reliable national estimates.
2. Provide reasonably reliable estimates for each of the following enrollment size categories:

- a. 25,000 and over
- b. 10,000 - 24,999
- c. 5,000 - 9,999
- d. 2,500 - 4,999
- e. 300 - 2,499
- f. Under 300

In this publication the enrollment size categories are based on 1969-70 ADM.

3. Provide State estimates that would have approximately the same precision and confidence level for each State. That is, the number of school systems in the sample for any given State was to be of sufficient size so that the estimated total enrollment for that State would have a relative error of about 7.5 percent at the 95 percent confidence level.
4. Include all systems with enrollments of 5,000 or more.

It was anticipated that enrollment would be highly correlated with many other survey variables. Accordingly 1969-70 ADM or, where not available, ADA or other pupil count measure was used as the design variable, and systems within each State were stratified by this measure of size. Because of the differences in the distribution of the school systems by size from State to State the enrollment size categories shown above for which national estimates are presented did not constitute an efficient stratification in all cases for State estimates. To solve this problem a separate stratification pattern was devised for each State which provided for additional stratification within enrollment size categories for sampling purposes, where appropriate. The sampling strata boundaries for each State are shown in table i.

The sample selection procedure used was to rank the systems within a stratum by size and select the required sample as a systematic sample with a random start. A separate random start was used for each enrollment size stratum in each State.

#### Estimates of Totals

For estimating totals, the figures for each reporting school system were inflated by the reciprocal of the sampling rate in the stratum from which it was selected, adjusted for nonresponse.

Changes occurred in the universe of local public school systems after the sample was selected, necessitating adjustments to the universe. The type of adjustment varied depending on the nature of the problem, the information available at the State education agency, and the information in the following year's universe. Specifically these corrections were as follows:

- In Indiana, the sample was selected from a preliminary universe. The revised universe showed considerable differences in number of districts per stratum. Estimates were derived as follows:
  - a. The sample school systems were inflated by the original inflation factor.
  - b. The systems were then placed in the correct stratum for purposes of estimation.
  - c. Because the number of districts in the corrected universe is known, an adjustment factor  $\frac{Nh}{N'h}$  was applied, where Nh is the known number of cases in the revised universe for a given stratum and N'h is the number in the revised universe for the stratum as estimated from the sample.
- In Minnesota, the SEA provided information of a major reorganization reducing the number of school systems with less than 300 enrollment from 270 to 234. The number of sample cases dropped from 6 to 4. The new universe and sample numbers were used for purpose of inflation thereby changing the weight of the under 300 stratum from 45.00 to 58.50.
- There were also instances where discontinued sample cases indicated changes in the universe. In these cases, the fall 1970 universe was compared with the fall 1971 universe and the more appropriate of the following two procedures was used.
  - a. It was assumed that the closed cases in the sample represented the closed cases in the universe. This was done in the following States:

<u>State</u>	<u>Stratum</u>	<u>Reduction in sample</u>	<u>Reduction in universe</u>
Nebraska	under 300	7	104
South Dakota	under 300	3	22

- b. Where the procedures described in a., above would result in unreasonably low universe figures, both the sample and universe were reduced by the number of closed sample cases, as follows:

<u>State</u>	<u>Stratum</u>	<u>Reduction in sample and universe</u>
Maine	Under 300	2
Massachusetts	" "	1
North Dakota	" "	1
Oklahoma	" "	1
Texas	300-2,499	1
Vermont	Under 300	1

(There were also instances of closed cases in certainty strata. In these cases, of course, both the universe and sample were reduced by the number of closed cases).

Estimates for the school systems in the "under 300" stratum for the 6 States shown below, where there was no sample coverage, were obtained from the comparable stratum from another State that was matched on the basis of region and of average ADM by the following formula:

$$\text{where } x'_{so} = \frac{\sum x_{sp}}{n_{sp}} N_{so}$$

$x'$

$so$  = estimated cell total for State not having sample coverage

$\sum x_{sp}$  = sample total for a variable for the comparable stratum from a matching State

$n_{sp}$  = number of sample cases in the stratum for the matching State

$N_{so}$  = number of systems in the universe for the State not having sample coverage.

<u>State</u>	<u>Number in Universe</u>	<u>Matching State</u>
Georgia	1	Arkansas
Mississippi	1	Arkansas
Nevada	3	Washington
Ohio	6	Indiana
Tennessee	1	Kentucky
Utah	2	California

Table i shows the number of systems in the universe and the selected sample by size group within each State and also presents the number of respondents, nonrespondents and the inflation factor used after adjusting for nonresponse.

### Sampling Reliability

Because the figures in this report are estimates derived from a sample, they are subject to sampling variability. As a guide to users of the data, approximate measures of the sampling reliability of the survey estimates are presented in tables ii, iii and iv. Table ii gives the coefficients of variation for estimates of selected staff variables, by enrollment size, metropolitan status, and region; table iii gives coefficients of variation for estimates of number classroom teachers by highest level of education completed; and table iv gives coefficients of variation for selected staff variables by State. The chances are about 2 out of 3 that the percentage difference between an estimate and the figure that would have been obtained from a complete canvass of all school systems, using the same survey forms and procedures, would be less than the limit of error specified in the table. Similarly, the chances are about 19 out of 20 that the percentage difference would be less than twice the specified limit of error and about 99 out of 100 that it would be less than 2.5 times the specified limit.

An illustration of the use of the sampling variability tables follows:

The national estimate of the number of prekindergarten teachers in local public school systems is 3,125 (table A). The relative sampling error given in table ii is 1.3 percent or 41 teachers. In applying the probabilities described above, the chances are about 2 out of 3 that the figure of 3,125 would not differ by more than 41 from the results of complete coverage of all school systems.

The coefficient of variation does not reflect response biases, or systematic errors that may have been incurred in the data handling processes, such as would be applicable even if there were complete coverage of all school systems. However, concerted effort was made to minimize such errors through editing and followup procedures.

Table i.--Universe and sample:

## APPENDIX B

### RELATED DATA

In addition to this survey showing data collected on individual school systems, as well as providing national estimates, NCES conducts other surveys from which data for national and state totals of schools, pupils, finance, and staff are collected, all of which recently have been incorporated under the ELSEGIS umbrella.

The survey State Elementary and Secondary School Statistics consists of comprehensive state aggregate reports collected biennially. It reports data on public school organization, staff, pupils, and finances. Data are currently in preparation for release in the publication known as Statistics of State School Systems, for 1969-70.

The survey Fall Report on Membership, Teachers, and School-housing, popularly known as the "fall survey," is conducted each fall to obtain quick estimates of enrollment, number of teachers, school-housing statistics, and estimated expenditures for the current year. As with the biennial survey, data are collected by means of state aggregate reports. Data covering the same time period as the present survey are presented in Fall 1970 Statistics of Public Schools.

Education Directory, Public School Systems, is prepared annually. Because data on the number of pupils, usually Average Daily Member (ADM) for the previous year, are collected, summary data are tabulated. The directory with data corresponding most closely to those of this report is Education Directory, 1971-72: Public School Systems.

Because of differences in purposes, coverage, and method of data collection, estimates in this publication will vary slightly from figures for the same or similar variables presented in some other OE publications. For example, the national estimate of fall 1970 classroom teachers in the present report is 2,013,506; the comparable figure for the fall survey is 2,016,115.

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE OFFICE OF EDUCATION WASHINGTON, D.C. 20202	O.M.B. NO. 51-R0681 APPROVAL EXPIRES 9/30/71
<b>ELEMENTARY-SECONDARY GENERAL INFORMATION SURVEY</b> of <b>Public Elementary-Secondary School Systems</b>	
	OE IDENTIFICATION <b>ELSEGIS III-A</b>
	DATE DUE <b>DECEMBER 1, 1970</b>

**ELSEGIS - III**

**PART A - STAFF: FALL 1970**

**INTRODUCTION**

With this report form, the U.S. Office of Education in cooperation with the Committee on Educational Data Systems (*CEDS*) of the Council of Chief State School Officers continues the Elementary-Secondary General Information Survey (*ELSEGIS*).

Data are being requested from a State representative sample of local public school systems. To those who participated in past *ELSEGIS* surveys, we thank you for your continued excellent response; to those participating for the first time, your cooperation in this important project is very much appreciated.

In completing the form, please follow the attached instructions very carefully.

Return this completed form to:

Instructions for Completing OE Form 2350-1

ELEMENTARY-SECONDARY GENERAL INFORMATION SURVEY III, PART A, STAFF DATA

GENERAL INSTRUCTIONS

Data should be reported as of October 1, 1970, or some other early fall 1970 date when the school system's operation can be considered stabilized.

Enter data into the proper field. DO NOT LEAVE ANY FIELD BLANK. If there is no entry for a particular field, zero fill the data field. If precise data are not available, please provide your best estimate of the entry for that variable, and enter an X in the column provided.

SPECIFIC INSTRUCTIONS

ITEM A. This item is designed to obtain data for the entire staff of the school system and should, therefore, include staff members assigned to individual schools as well as those working out of the central office. Count only full- and part-time staff members filling positions. DO NOT count unfilled positions.

*Full-time equivalency of assignment* is the amount of employed time that is normally required of a staff member to perform a less-than-full-time assignment within an assignment classification in proportion to that normally required in a full-time assignment in the same assignment classification, with "1" representing one full-time assignment. It is derived by dividing the amount of employed time normally required in the less-than-full-time assignment by the amount of employed time normally required in a corresponding full-time assignment. Full-time equivalency of assignment should be expressed as a decimal fraction to the nearest tenth.

For each position assignment category determine the full-time equivalency of each staff member. The sum of the equivalencies of each staff member within an assignment category should be entered in the appropriate space on the form.

- Examples:
1. Each person assigned full-time to a position category should be counted as 1.0.
  2. A person employed full-time, but assigned to more than one position category should be counted part-time in each category, e.g. a person who spends 3 days per week as a guidance counselor and 2 days as a classroom teacher should be counted 0.6 as counseling, and 0.4 as teaching.
  3. A teacher aide employed 2 hours per day in a school system with a 6-hour day should be counted as 0.3

Definition of Position Assignment Categories

1. Staff members assigned as administrative heads of schools, i.e., those to whom the major responsibility for the management and direction of the activities of the school has been delegated.

2. Staff members assigned to assist the head of a school in the management and direction of the school.
3. Staff members performing activities of leadership, guidance, and expertise in a field of specialization for the purpose of improving the performance of teachers and other staff members.

A4-A5. Self-explanatory.

A6-A7. The classification of teachers into elementary and secondary will depend on State and local practice. However, teachers of grades higher than 8 should not be reported as elementary and teachers of grades lower than 7 should not be reported as secondary. Where a teacher is teaching at both the elementary and secondary levels, prorate the assignment between the levels in terms of full-time equivalents.

A8. Self-explanatory.

A9. Staff members who teach through the mediums of television or radio, and teachers of the homebound.

A10. Staff members responsible for organizing and managing school libraries.

A11. Staff members responsible for advising pupils with regard to their abilities and aptitudes, educational and occupational opportunities, personal and social adjustments, etc.

A12. Psychologists and psychometrists responsible for providing psychological services to pupils, including the administration and interpretation of psychological tests. DO NOT include here psychiatrists or psychiatric social workers. Such noninstructional professional staff should be reported in A19.

A13. Staff members responsible for preparing, caring for, and making available to instructional programs, the equipment, materials, scripts, and other aids which assist teaching and learning through special appeal to the senses of sight and hearing, e.g., director of audiovisual services, film inspector, projectionist, scriptwriter, graphic artist, etc.

A14. Self-explanatory.

A15. Staff members performing activities of a nonteaching nature which are NOT classified as professional educational, but which assist a teacher to perform professional educational teaching assignments (*aides, helpers, assistants, etc.*).

A16. Staff members working in the school library who perform activities which

are NOT classified as professional. Such duties may include distributive functions for the loan of materials, and assistance with the organization and use of materials.

A17. Secretaries and clerks assisting the professional staff reported in A1-13 above. (Exclude any reported in A15 or 16.)

A18. Self-explanatory.

A19. All professional staff members other than the professional instructional staff members listed in A1-13 above. Report here the superintendent of schools; deputy, associate, and assistant superintendent of schools; school business officials; central office staff responsible for system wide administration of operation, and maintenance; attendance officers; social workers; doctors; nurses and other health officials, etc.

A20. Such nonprofessional staff as janitors, maintenance men, cafeteria workers, bus drivers, and secretarial and clerical workers other than those reported above.

A21-A22. Self-explanatory.

ITEM B. Report separately in the appropriate areas for classroom teachers and for other professional staff. (For definition of other professional staff, see those for items A1-3, A9-13, and A19). In this item, include all professional staff members, full time and part time; DO NOT report in full-time equivalence.

Report only on the basis of degrees actually completed or granted. For example, a staff member who has completed all course work towards a Master's degree, but who is still working on a thesis should be reported in the Bachelor's degree column.

ITEM C. Enter change in classroom teaching staff from Fall 1969 to Fall 1970.

C1. Enter the number of full-time classroom teachers on the staff October 1, 1969 or nearest date thereto when the school system's staffing pattern has stabilized.

C2. Enter the number of persons added to the full-time teaching staff of the school system after the fall 1969 date used to establish the count in C1.

a. Include all teachers who never taught elementary or secondary school before. Such teachers may include recent college graduates, former college

teachers, former day-to-day substitute teachers, persons coming from non-teaching jobs, etc.

- b. Include persons who had previous teaching experience but were not full-time classroom teachers during the school year 1968-69, e.g., teachers returning to teaching assignments from other positions, teachers returning from a leave of absence, etc.
- c. Include teachers who taught during the school year 1968-69 in another school system (public or nonpublic).
- d. Include new teachers whose 1968-69 occupation is unknown.

C3. Include all teachers dropped from the full-time teaching staff of the school system after the fall 1969 date used to establish the count in C1.

- a. Include teachers who retired, i.e., those who either reached the compulsory retirement age or who retired at an earlier age (for example, for reasons of health) and drew retirement or social security benefits. Do not include here young women who "retired" to become housewives; they should be reported in line b.
- b. Report teachers who resigned from the school system for any reason, e.g., to accept a job in another system, to take a nonteaching job, to become a housewife, etc., and those who were dismissed or not rehired.
- c. Report persons included in lines 1 and 2c who are still on the school system staff but who no longer serve as full-time classroom teachers. Such a person may have transferred to a full-time position in another capacity -- e.g., principal, supervisor; or he may have transferred to a position in which he served part-time as a teacher and part-time in another capacity, e.g., guidance counseling.
- d. Include teachers who died, teachers on leave of absence, and any other separations not included in a through c above.

ITEM D. This item is to be used for control purposes to make certain that all of the schools in this system have returned Part C: 1970-71 School Data (OE Form 2350-3).
